Auto?Responder Got It Wrong

How I fixed a broken reply in 3?hours

Step 1 - Read & Tag

> Set Claude to read new emails. > Use simple regex (e.g., "Subject:") to extract the topic. > Store the tag in a JSON file.

Step 2 - Prompt for Draft

> Prompt Claude: "Write a reply for a [tag] email." > Include placeholders for subject and sender. > Test with a sample email.

Step 3 - Debug the Prompt

> My first prompt omitted the subject placeholder. > Claude returned a generic thank?you. > Add "subject" token, retest.

Step 4 - Stripe Test

> Insert test secret key from Stripe dashboard. > Ensure no extra spaces or line breaks. > Run a $1 test charge.

Step 5 - End?to?End Check

> Send a real inquiry email. > Verify tag, draft, and reply are all correct. > Confirm Stripe webhook fires and records payment.
