

WEEK 4

Learn Basic Coding

Start with operators and data types

You use operators to perform actions on data

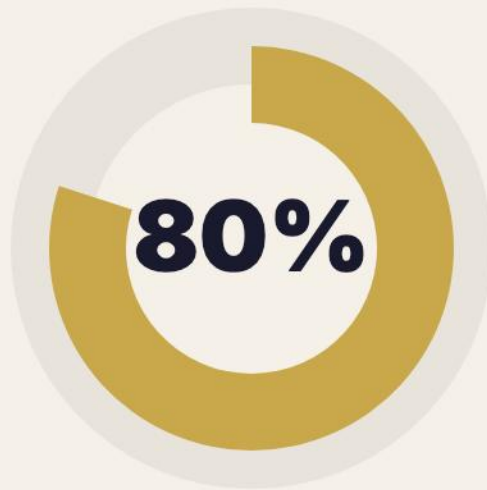

A data type is what kind of value something is

Three steps. One pipeline. Done.

Whole numbers, decimals and **text** are different types

Adding a number to **text** stops with a TypeError

Sent. Delivered. Broken.

No alert. No error. Five weeks of silence.

You can use **print** to display results in your code

3 outputs. 0 manual work. Every Monday.
