

WEEK 12

Speed Up Your Search

Learn why efficiency matters

A dictionary finds a name without checking every one

Linear search checks every item one by one

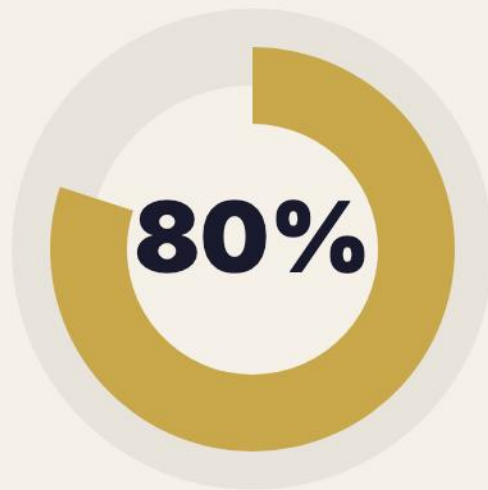

A dictionary jumps straight to the key you ask for

Three steps. One pipeline. Done.

Large datasets require efficient search methods

You can **save** time by using the right search method

3 outputs. 0 manual work. Every Monday.

Follow to learn more about building efficient searches

Real posts on building with AI.
New every Monday.
