

WEEK 14

Fix Code Errors Easily

Learn to handle mistakes like a pro

Your code can crash without proper error handling

This will break silently.

And you won't notice until it's too late.

Add the alert before you need it.

Use **try/except** to plan for an error you expect

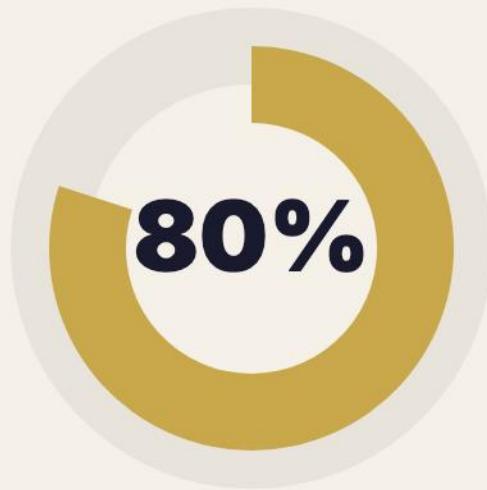

Errors are mistakes in code that prevent it from running

Three steps. One pipeline. Done.

Except blocks handle errors and keep your program running

Handling errors makes your digital products more reliable

3 outputs. 0 manual work. Every Monday.
