

Auto?Transcripts with a 401 Twist

Build a YouTube transcript flow in 3 days, even if you're a beginner.

Step 1 - Get the Key

Sign in to Google Cloud > Create a project > Enable YouTube Data API v3 > Generate an API key. Copy the key.

Step 2 - Pull Video Info

Use requests in Python > GET

https://www.googleapis.com/youtube/v3/videos?part=id,snippet&id=VIDEO_ID&key=API_KEY > Extract video ID and title.

Step 3 - Fetch the Transcript

Call https://video.google.com/timedtext?lang=en&v=VIDEO_ID > Parse XML > Convert to JSON > Pass to Claude for summarisation.

Step 4 - Store & Auth

Save transcript JSON in Firestore > Add Firebase Auth > Create sign?up/login pages
> Track transcript count per user.

What's Next

Add rate?limit handling > Improve Claude prompt > Launch a beta to early users.

Follow for weekly posts on building with AI from scratch.
